DataVis assignment 1

By Boris Das s1011626.

In the assignment I made an arc/pie chart of the character frequency tsv. Each arc piece represents the proportion of the frequency I it has. I chose the hard assignment because I like a challenge and I already have quite some experience in other languages. I did find going back to a weakly typed language hard but I'm getting back into it.

I wrote some function with the color and scale tools from d3js to make the segments increase in color based on hue to make the parts look more colorful.
